## DETAILED ACTION

### *Status of the Claims*

1. Claims 112-117 are pending.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claims 112, 116 (and claims 112-117 which dependent from claim 112) are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.
4. Claim 112 recites in the preamble a method of modifying or detecting. The claim recites a cleavage step, which is the method of modifying. However, there is no detection step. As such the claim is vague and indefinite. Addition of a step for detecting the cleaved portion of the polynucleotide would cure this defect.
5. Claim 116 recites the limitation "said oligonucleotide hybridization sites" in lines 1-2. There is insufficient antecedent basis for this limitation in the claim.

### *Claim Rejections - 35 USC § 102*

Art Unit: 1636

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) do not apply to the examination of this application as the application being examined was not (1) filed on or after November 29, 2000, or (2) voluntarily published under 35 U.S.C. 122(b). Therefore, this application is examined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

7. Claims 112-117 rejected under 35 U.S.C. 102(e) as being anticipated by US 5,210,015 (Gelfand et al.).

Gelfand et al. teach at the abstract and column 2, a method of modifying or detecting a polynucleotide by providing a target nucleic acid (this corresponds to the instant claimed polynucleotide) which hybridizes to a first oligonucleotide (this corresponds to the instant claimed first oligonucleotide). The 3' portion of the first oligonucleotide hybridizes to the 5' portion of the target nucleic acid. A 5' nuclease cleaves the unhybridized 5' portion of the target nucleic acid. The 3' portion of the target nucleic acid hybridizes to the first oligonucleotide. The 5' portion of the target nucleic acid hybridizes to a labelled oligonucleotide (this corresponds to

Art Unit: 1636

the second oligonucleotide of instant claim 113). The target nucleic acid may be from a virus (see Gelfand et al. at column 7, last paragraph) as recited in claim 115. The hybridization sites are contiguous, and the labelled oligonucleotide has a label (see column 2, lines 27-39) as recited in claims 116 and 117. The cleaved fragments are detected by the presence of the label as recited in claim 114.
